

# Viking Lock Update

We want to announce a change to the way Viking cabinets will ship from the Miele Manufacturing factory. We will **no longer** install our standard shipping locks on them. They will ship without locks.

Going forward, you will need to **buy and install your own** coded 1" straight cam type barrel locks. This will improve security on these cabinets by increasing the variety of locks used on them.

Additionally, we'd like to remind you that these cabinets were designed with security in mind. They ship equipped with a security bar that accepts a puck lock to provide an additional layer of protection. We strongly encourage you to install a puck lock on every Viking cabinet.
